

MSP wins Cirium global award for on-time operations

Minneapolis-St. Paul International Airport (MSP) wrapped up 2023 with a rare double win in the 2023 On-Time Performance Review, garnering the top global airport and large airport awards from Cirium, a global aviation analytics firm.

Cirium presented the awards last week to Metropolitan Airports Commission (MAC) CEO Brian Ryks and Chair Rick King during a ceremony at MSP that included hundreds of airport employees. MSP is the first North American airport to win the award in more than a decade.

"Last winter challenged our region with heavy and frequent snowstorms, yet our teams showed their dedication keeping equipment, facilities and the MSP airfield in prime condition to achieve the best possible operational capabilities that contributed to achieving this rare industry honor," Ryks said.

Now in its 15th year, the Cirium On-Time Performance program monitors global airline and airport operational performance through extensive and unbiased data, derived from over 600 real-time information sources.
