Sunfish Lake Tree Inventory

This year we begin documenting the City's trees by conducting an inventory of significant trees and recently installed trees on public lands. Initially the inventory will record trees along city streets though Upper 55th Street and Charlton Road will be inventoried after potential future road work. Trees will be identified by location, species, size and condition.

Once the street tree inventory is complete, except for 55th Street and Charlton Road, then Harmon Park and Musser will be done. Musser Park and Harmon Park are planned to be evaluated for density of woody invasive species later.

We expect that the inventory will allow better data-based recommendations for new tree plantings on both public and private lands. The inventory will suggest better tree species for planting in City parks especially following invasive species removal. The inventory will be gathered on paper forms and entered an Excel Spreadsheet for retention and data analysis.
